

## Abstract

They say the best way to learn something is to quiz yourself repetitively. We aim to create a user friendly app designed for people of any age group to use.

## Approach

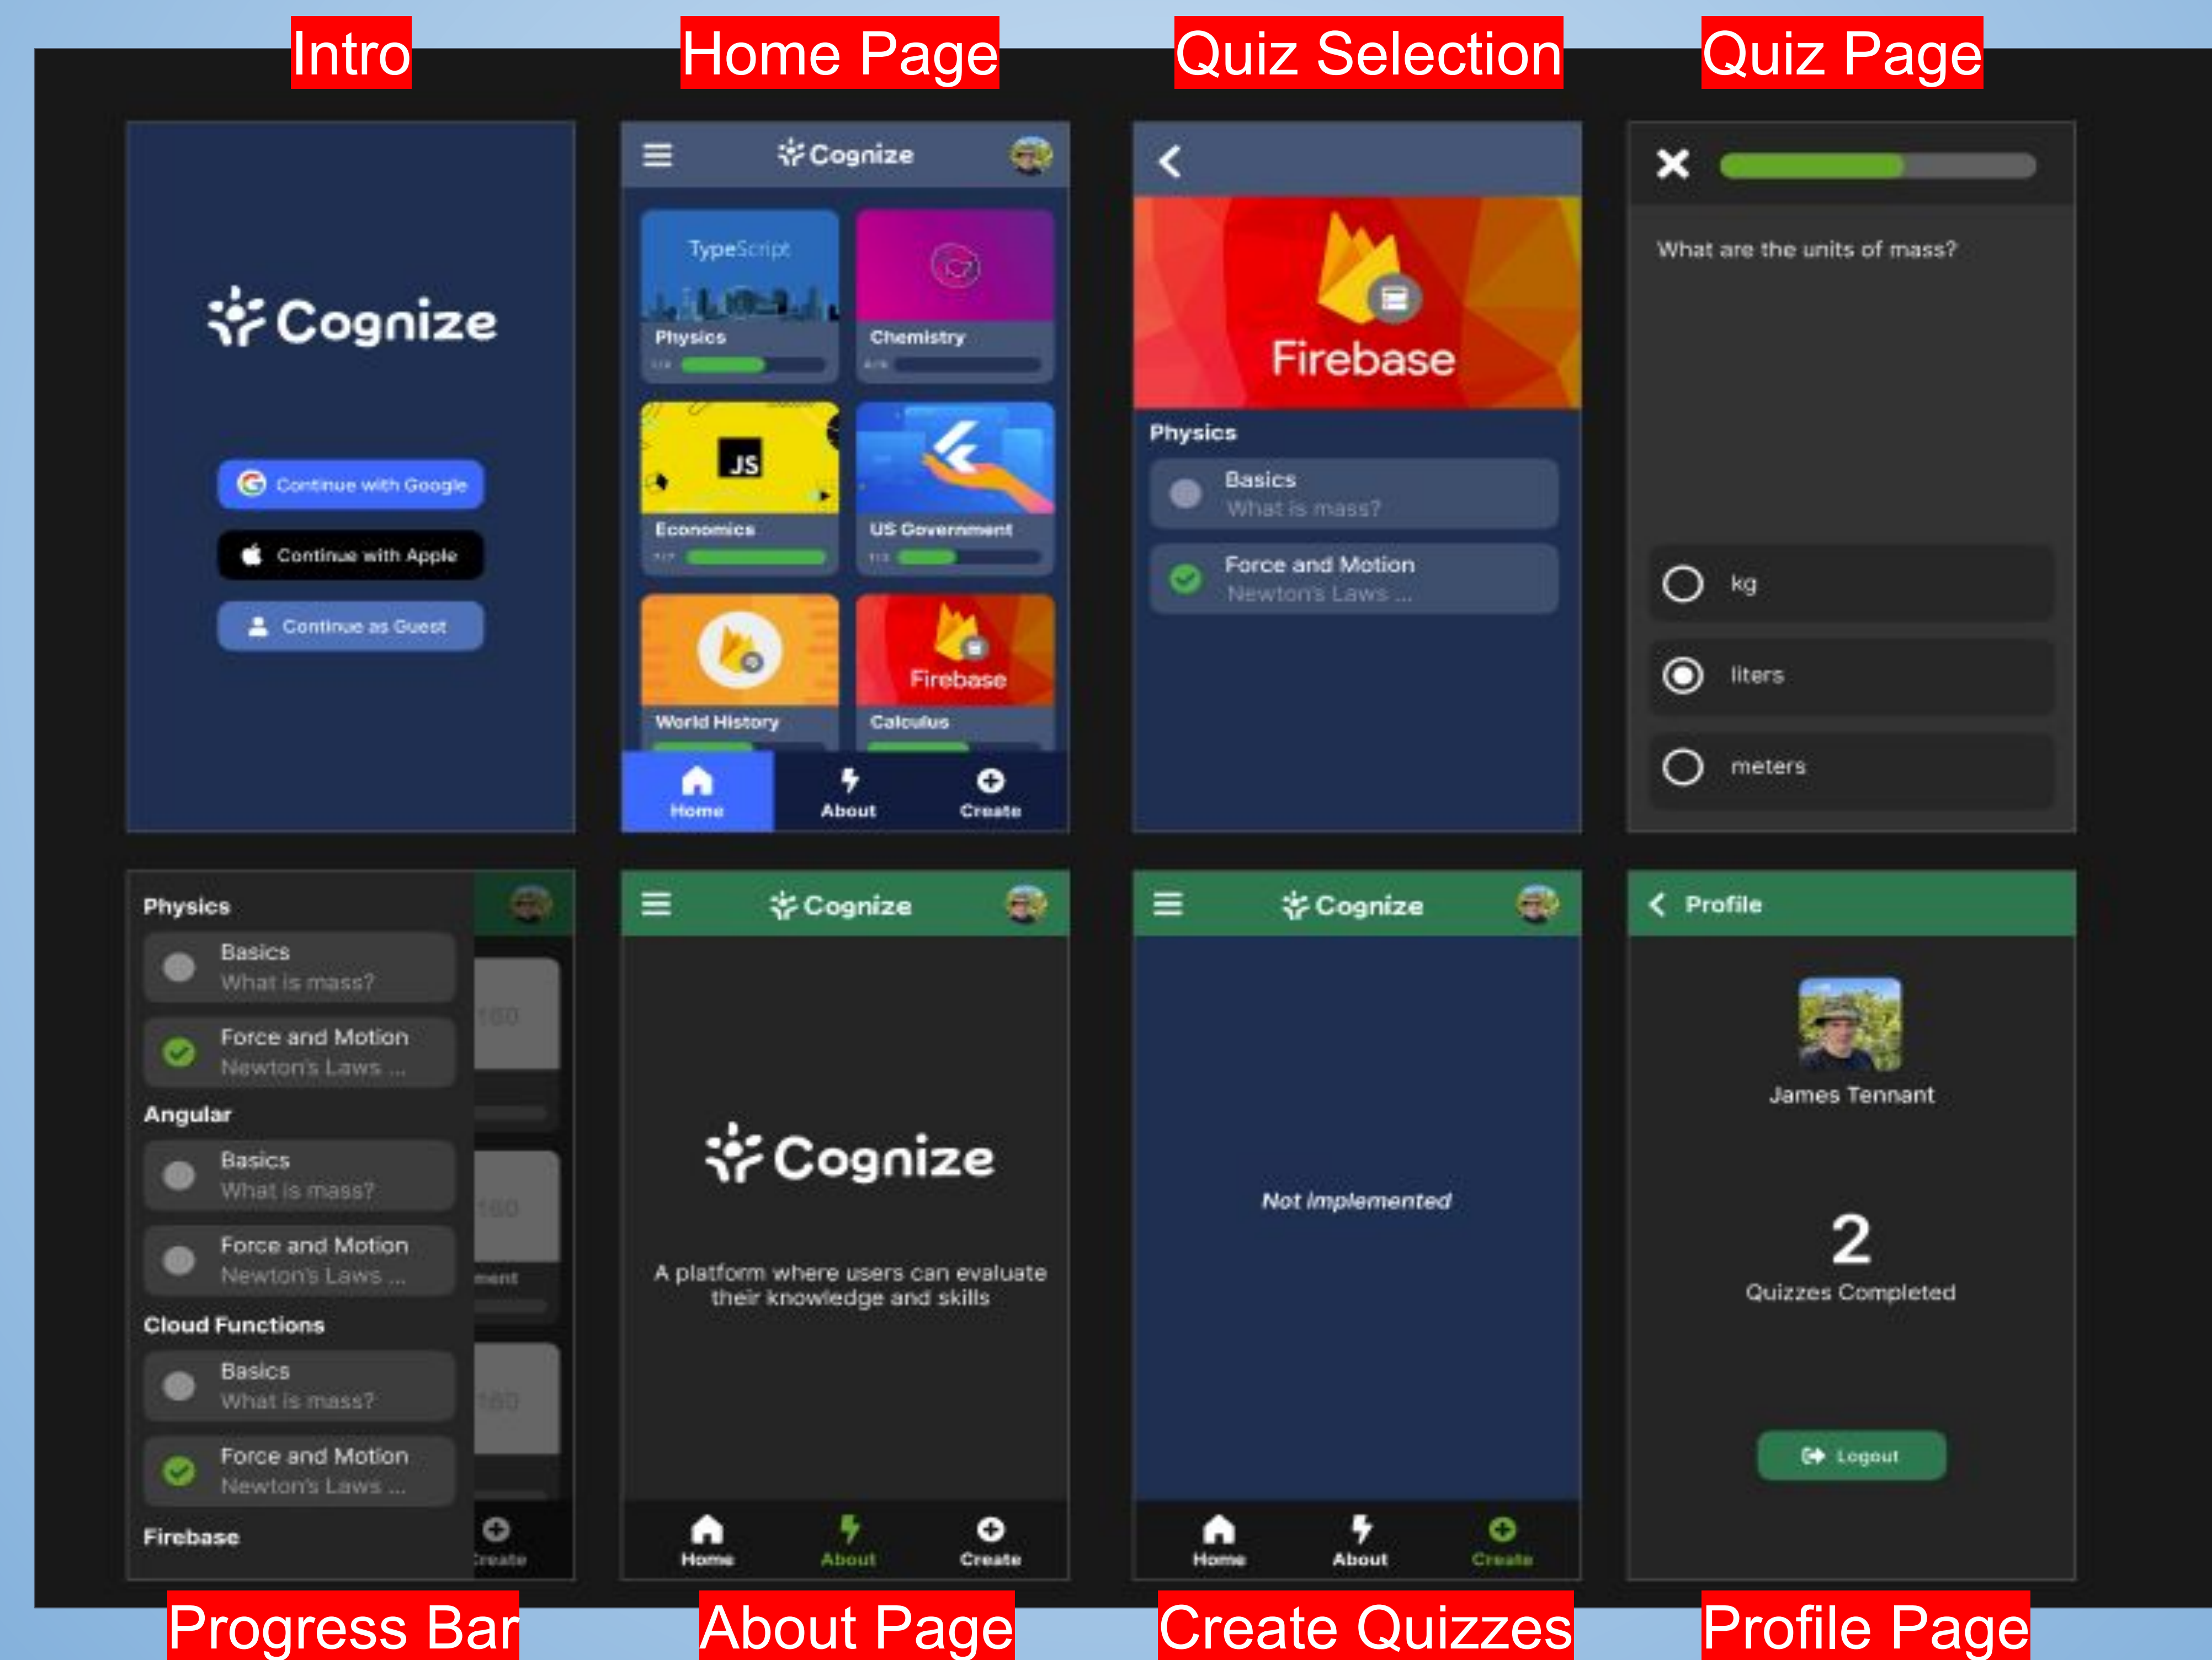

- **Flutter** allows us to create a seamless frontend user interface for taking quizzes.
- **Firebase** allows convenient storage of users and user-created quizzes

## Architecture

## Overview

The goal of Cognize is to **make learning engaging and fun through a plethora of quiz options**, point system for awarding users when they complete quizzes and quiz creation with friends. **Cognize is intended for students, teachers and anyone who wishes to learn through self assessment** in an engaging manner.

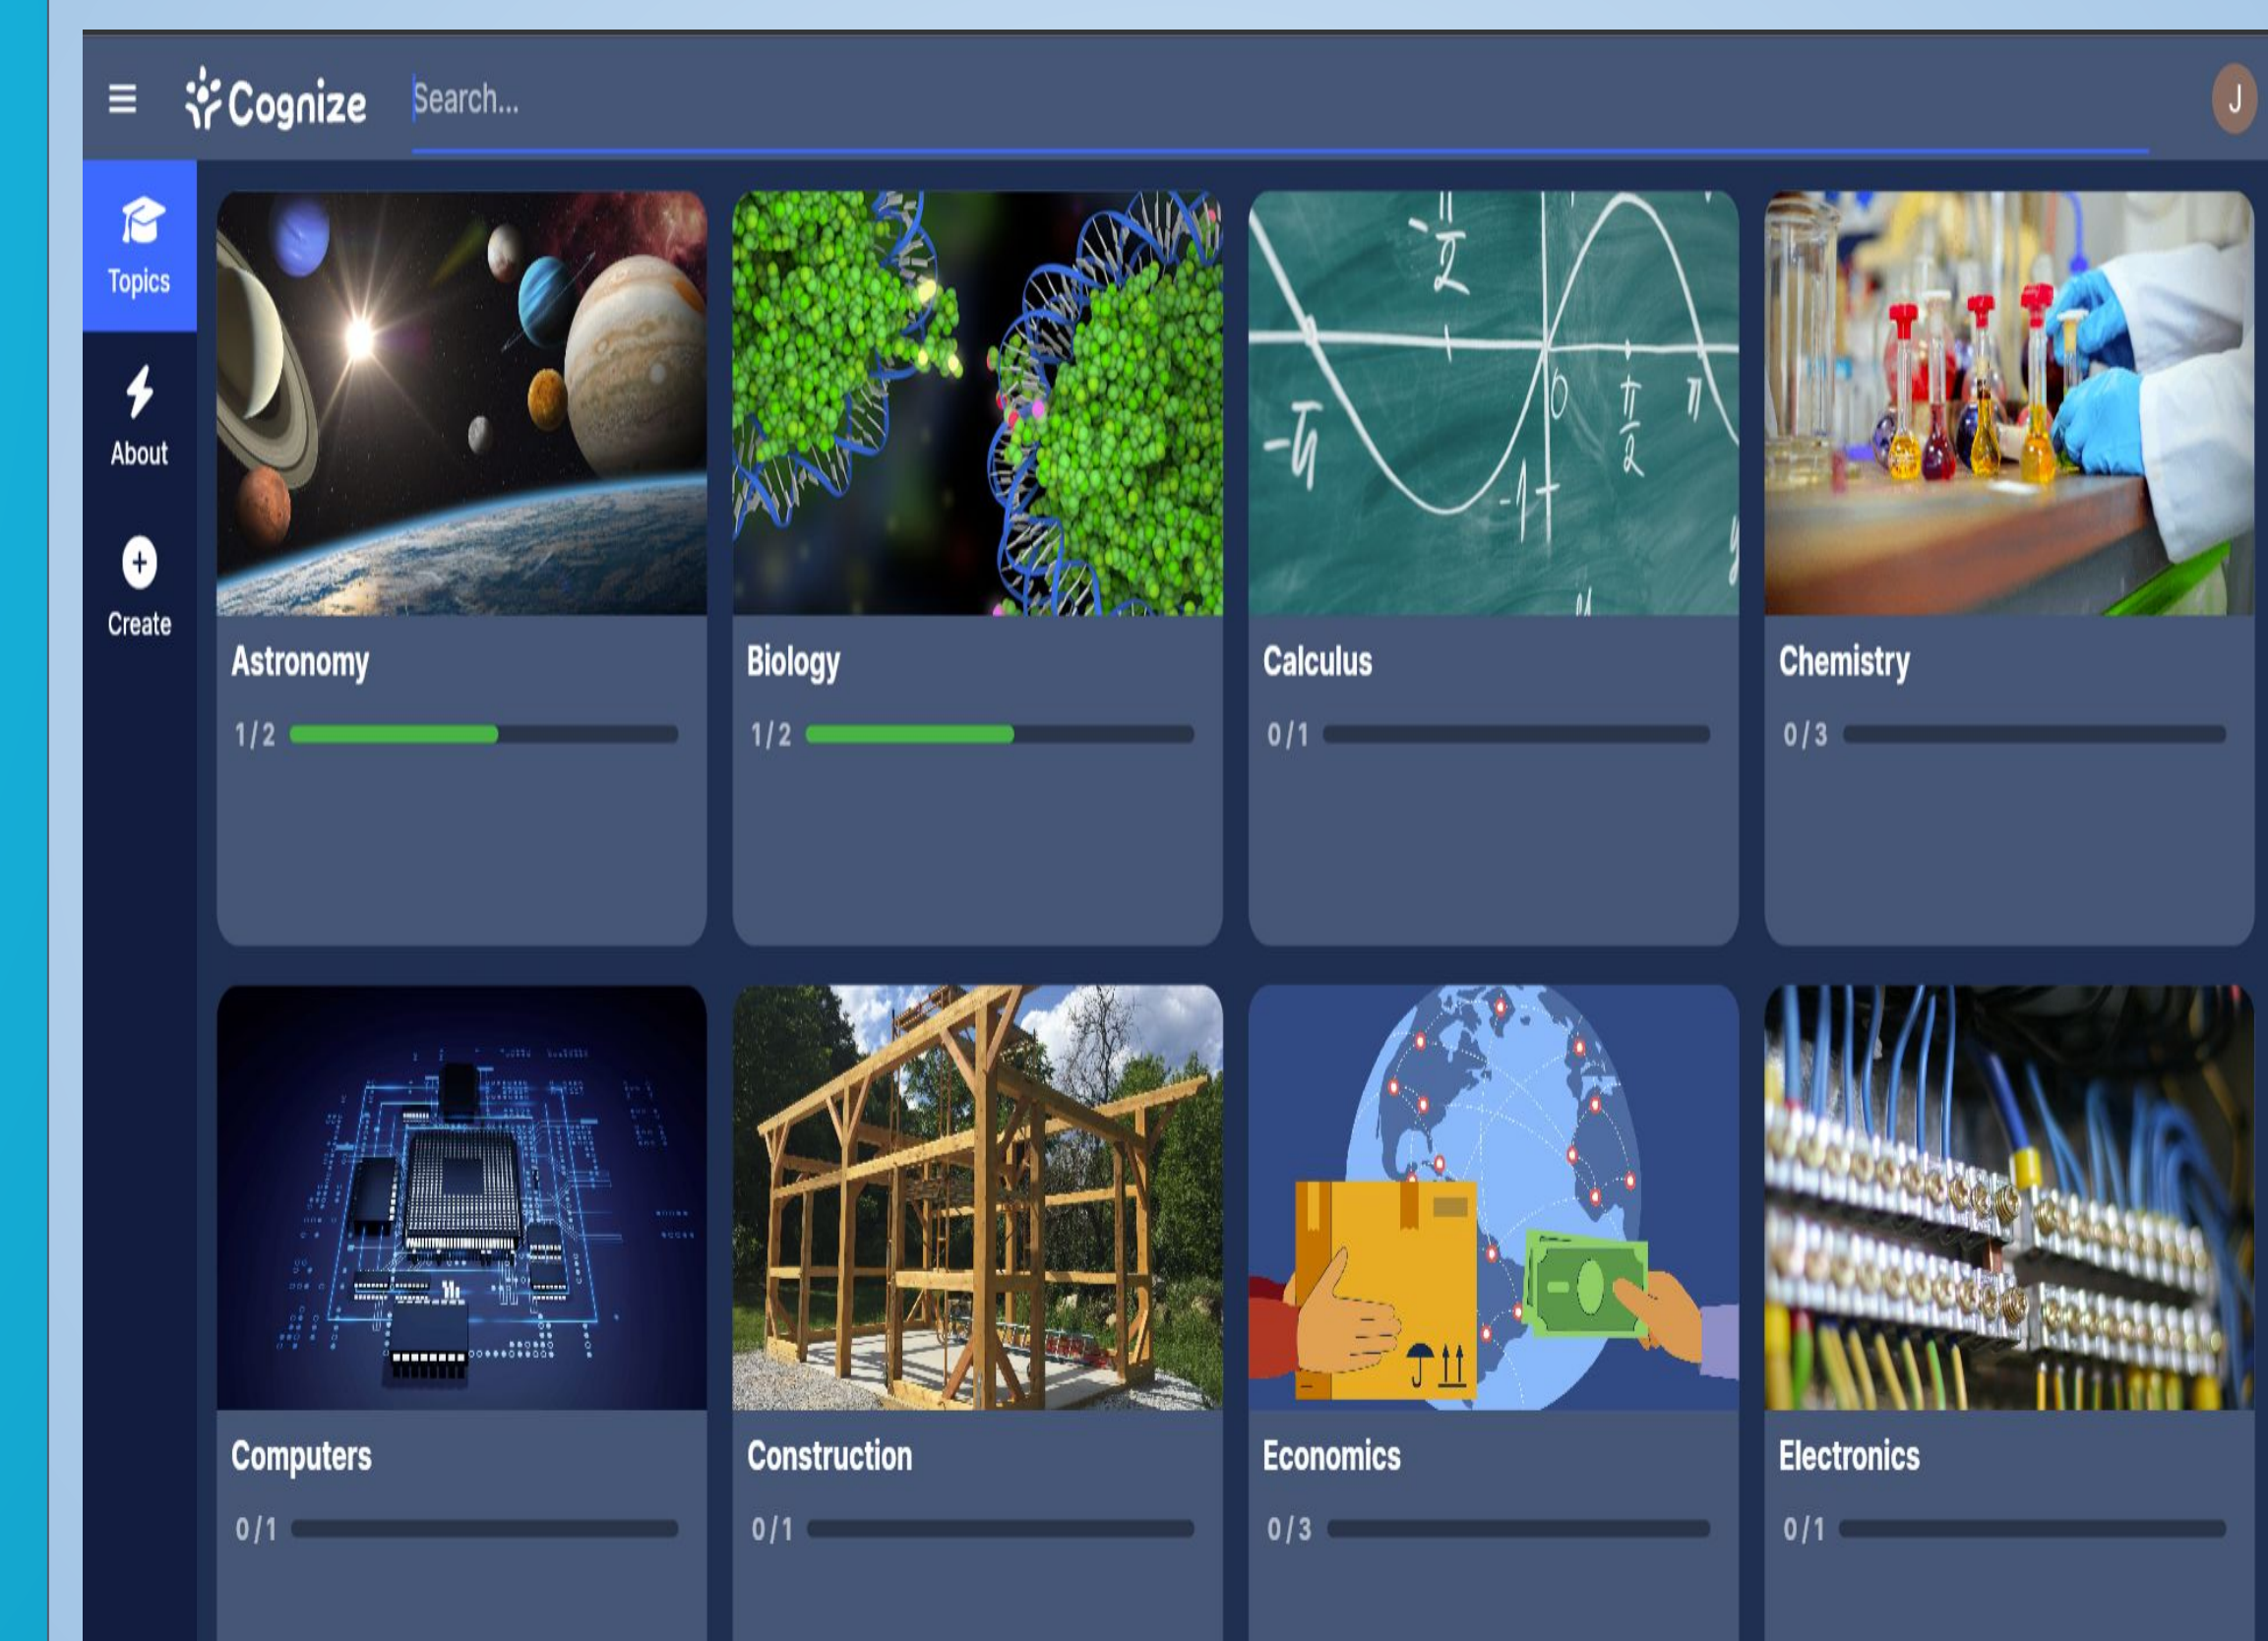

## Acknowledgments

Special thanks to Professor Richard Jullig and James Tennant for sponsoring this project.

## Results

- A working website that works on web and mobile
- A login system using Google authentication
- The ability to take multiple choice quizzes;
- Ability to create quizzes and publish them to the app

## Home Page

## Conclusion

Our website is already active, and is deployed on the Google play store and the Apple store.
