Cognize Setup Guide:

The official release is out on cognize.dev

What you need to install to setup everything:

Quick Guide:
https://docs.flutter.dev/get-started/install/macos

Flutter (current version 3.13.7) for Windows and macOS:
- Android toolchain (Android devices)
- Xcode (iOS and macOS devices)
- Chrome (for Web browser)
- Android Studio and/or VSCode
- IntelliJ IDEA Ultimate Edition

Setup Firebase and install it, don't forget to create an account

OAuth Google authentication API (should already be set up)

To test out the code, run in the terminal:
flutter run -d chrome

To use the site, you have to log in using Google authentication.

Basics for using the app:
- The home screen leads you to the quizzes, profile menu, and a dropdown navigation menu.
    - Also features a search bar
- The navigation leads you to the ability to create quizzes and an About screen.
- The profile menu shows how many points you have, and the ability to logout.
- The create feature allows you to create multiple-choice custom quizzes, under specific subjects and descriptions.
- The About screen is just the login screen basically, but a more basic version of it.
